

A dynamic sitemap is included with SEO CMS Global™. When you change, add, or move content on your website the sitemap is automatically updated and regenerated. A sitemap is an important tool used by search engines to quickly and efficiently index your website. The sitemap will also help the customer to find content that isn't being indexed because links aren't visible to the search engines. SEO CMS Global™ also provides a google sitemap compliant url that can be submitted to google sitemaps. Google sitemaps provide the customer a lot of valuable information regarding google's indexing and visits to your website.
